

Who can do what on the platform

WebInOrbit Real Estate is a white-label platform: map search, 360-degree virtual tours and automatic lead routing for real-estate companies. This page explains what each kind of user can do.

1. Visitors (home buyers and renters)

Anyone on the public website. No login needed.

- Search homes on a map: filter by price, bedrooms, type and amenities; Buy / Rent toggle
- Draw an area on the map, use "near me", or switch on the price heatmap
- Open a property to see photos, details, a mortgage calculator and the neighbourhood map
- Take 360-degree virtual tours (where the client's plan includes tours)
- Save favourites, compare up to 3 homes and save searches
- Send an enquiry, request a callback or book a visit - the lead goes straight to the right broker
- Chat with the company on WhatsApp or call the number shown on the site
- Use dark mode and the quick search (Cmd/Ctrl + K)

2. Brokers (the client's sales team)

Signed-in staff of one real-estate company. Brokers only see their own work.

- See a personal dashboard with their leads and response times
- Receive new leads by email when the routing engine assigns them
- Work leads in the inbox and the kanban pipeline: contacted, viewing, negotiation, won, lost
- Add notes and update lead status; respond within the SLA time to keep a lead
- Cannot see other brokers' leads, listings management, settings, billing or other clients

3. Client owners and admins (each real-estate company)

The person running one client's site. Sees everything for that client only.

- Add, edit and delete properties; upload photos (drag to reorder) and pin the location on a map
- Bulk-import listings from CSV with automatic geocoding (Pro and Enterprise)
- Create and publish 360-degree virtual tours (Pro and Enterprise)
- Manage the team: add brokers, set their areas, languages, working hours and capacity
- Set up lead routing rules and strategies, test them in the simulator, and review the audit trail
- Track every lead in the inbox and pipeline, and reassign leads manually
- Read the dashboard: charts, lead sources, response times
- Edit branding and settings: logo, colors, fonts, hero images, currency, contact details, map defaults
- View the current plan and its limits

4. Our company - WebInOrbit (platform super admin)

The platform owner. One account that can work across every client.

- Onboard a new client in minutes: business name, subdomain, owner email, plan and optional custom domain
- Switch any client between Starter, Pro and Enterprise, and suspend or reactivate a client's site
- Sign in to any client's workspace to help, check data or fix issues
- Control white-labelling: custom domains (Pro+) and removing platform branding (Enterprise)
- Every client site carries "Powered by WebInOrbit" with a link to webinorbit.com
- Run the shared platform: one deployment, one database, strict separation between clients
- Manage platform settings: map tiles, analytics script, email delivery, file storage

Plans at a glance

	Starter	Pro	Enterprise
Listings	25	250	Unlimited
Broker seats	3	25	Unlimited
360-degree tours	-	Yes	Yes
Routing rules and simulator	-	Yes	Yes
SLA timers and reassignment	-	Yes	Yes
CSV import	-	Yes	Yes
Custom domain	-	Yes	Yes
Webhooks	-	-	Yes
Remove platform branding	-	-	Yes

Each client's data is fully separate: one company can never see another company's listings, leads or team.
